

Evaluating a self-managed sentence therapy for people with aphasia

Seeking research volunteers

We are seeking volunteers with aphasia for a research project at UCL. We are testing if a new **therapy app improves understanding and producing sentences.**

Why is it important?

Most people find **sentences** hard to understand or produce after a **stroke**.

We have developed a new **therapy app** to **help** people with aphasia with **difficulties understanding and producing short sentences**. We want to find out if the app **helps** people to **improve their communicative skills**, and **how much therapy** is needed to get **positive outcomes**. We will also ask people what they **liked** and **didn't like** about the app.

What will it involve?

You will visit **Chandler House** to meet a **researcher** before therapy starts.

Chandler House is in **Bloomsbury** within short walking distance from Kings Cross / St Pancras and Russell Square stations. We pay **£15** towards your expenses for a meeting at Chandler House.

Then, you will participate in a new **4-week therapy** for aphasia.

The **therapy** involves **listening to words and sentences**, and **speaking**.

We will loan you a **tablet computer** to practise therapy tasks in your **own time at home**.

We will **measure your language** and other abilities **before and after therapy**.

- If you want, you can take part in a **focus group** after the therapy. This involves **talking about your experiences** with a **group** of other people who have used the therapy app.

Interested in taking part?

If you are interested in **taking part** or know someone who would like to take part, please **contact**:
